

PURACELL II
Mini-Pleat Series

FEATURES

The Glasfloss Puracell II Mini-Pleat Series is designed for use in applications where a high degree of efficiency is required in a 4" filter. The Puracell II Series combines state-of-the-art mini-pleat construction techniques with superior reliability to offer maximum value for commercial and industrial applications. Additionally, the Puracell II offers unique advantages over the traditional 12" rigid box filter including lower freight costs, reduced storage area requirements and less impact on landfills. The Glasfloss Puracell II comes in a variety of sizes and efficiencies.

CONSTRUCTION

Puracell II filters are manufactured with high efficiency microfiber media, which contains a water repellent binder. These unique fibers are moisture resistant and do not support the growth of bacteria or mold. Each filter incorporates a heavy-duty, double-wall, moisture resistant frame that is bonded around the perimeter of the filter pack. The high efficiency media of the Puracell II is separated and supported by uniform glue beads, which maximize the filtration area and reduce air flow restriction.

APPLICATIONS

The Glasfloss Puracell II Series is designed for use where a high degree of cleanliness is required and contaminants must be removed to protect life, products and/or building interiors. The Puracell II Series is used in a variety of applications such as: hospitals, office buildings, manufacturing plants, micro-electronic component assembly and food processing.

OPTIONS

As an option, the Glasfloss Puracell II has an internal channel header that is used to accommodate side access housing units.

- Compact Design for Maximum Air Flow
- Three Efficiencies Available
- Standard and Special Sizes
- Media Will Not Support Microbial Growth

SPECIFICATIONS

The Glasfloss Puracell II filter is a mini-pleat cartridge encapsulated between two heavy-duty, beverage board die cut frames. The die cut frames are bonded together creating a double-wall thickness around the perimeter of the filter. The Puracell II pack is pleated, wet laid microglass fiber media. The pleats are separated and supported by a uniform glue bead that produces a low initial pressure drop while maximizing the filtration area. The media pack is resistant to moisture and does not support the growth of bacteria and mold. The media pack is thoroughly bonded to the interior of the die cut frame. The filter shall be rated to withstand temperatures up to 180 degrees Fahrenheit. The recommended final resistance for Puracell II filters is 1.5" w.g.
